Crete Hawg

Electric/Hydraulic Gate Bucket Systems

Introducing: NextGen Crete Hawg with Electric/Hydraulic Power

The ingenuity of our original model is now even better!

Built on a decade of proven product success, we've designed our new Electric/Hydraulic Crete Hawg model with features that bring even more safety and efficiency to your production process, including;

More power at your fingertips. You'll enjoy our same popular slide gate functionality but with the torque and precision of electric/hydraulic power instead of air power. Plus, the control panel is streamlined for ultimate ease of use.

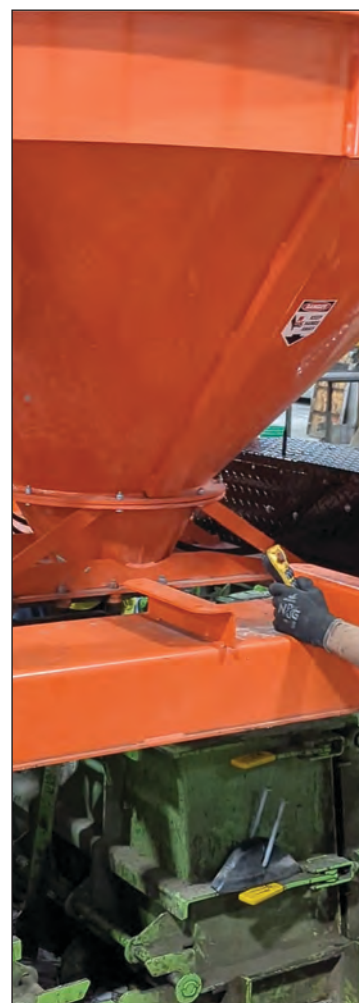

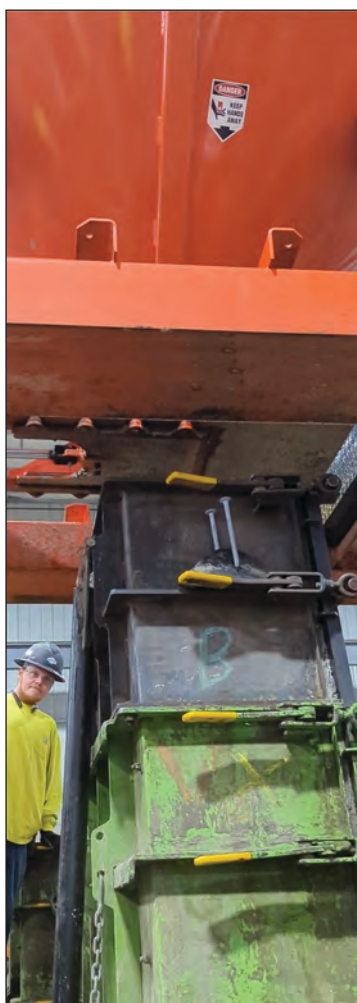

Save Time – Electric/Hydraulic power system eliminates the need to fill air tanks between pours.

Increased visibility. No more air tanks means an unobstructed view so you can pour with confidence.

Easy to Clean – You won't have to navigate around air tanks making clean-up a breeze.

Now Available on all Crete Hawg models

- Improved lifting bail pick point and lifting bail positioning that is parallel with the fork truck pockets for better visibility.
- Openings to chain the Crete Hawg to the fork truck mast and operator hand holes to optimize handling and maneuvering of the bucket while pouring.
